Warning: you do not need to spend too much time on each part of this sub-section

You do not need to memorize or learn by heart all the examples in the following pages. They are given as references. There will be no exercises about curves as they are not often used "by hand", but they are generated by tools such as Adobe Illustrator or online generators.

- **You need to draw arcs?** Then, please use the corresponding section as a reference: you know you will find one or more examples, also available on JS Bin, and a detailed explanation.

- **You need to draw lines? Arrows? Curves?** Same thing: go to the corresponding page and get a look at the examples!

Also, do not forget to use the cheatsheet we proposed at the beginning of the course. It provides a great help when you start playing with the canvas.
